

SOLAR DEPOT[®]

**Germany's
most sustainable
PV wholesaler**

© 2025

Germany's most sustainable PV wholesaler

We are convinced that we will have a positive impact on the future's energy transition by securing the supply with renewable products.

For us, energy must be available independent from states, corporations and infrastructure and must be available to everyone as a common resource.

A modern world is unimaginable without secure electricity supply and an indefinite availability of this resource.

3

Pillars of sustainability

The three-pillar model of sustainable development is based on the idea that this development can only be achieved through the simultaneous and equal implementation of environmental, economic and social goals. This way it is ensured to improve the ecological, economic and social performance of our society. These three aspects have to work together as a unit.

For us at Solar Depot, all internal processes within our company must be aligned with the three pillars of sustainability.

All actions must be based on economical, ecological and social goals. This way we reach our goal of being a fair, reliable and sustainable company.

The change to a sustainable world has long since begun and the monitoring of supply chains and the origin of products are being reviewed already closely on a global basis.

More and more countries and markets are requiring suppliers to provide evidence of their overall carbon footprint.

As Solar Depot we supply sustainable components and are committed base all our actions on the three pillars of sustainability.

At Solar Depot we are more than happy to support you in monitoring these sustainable guidelines during the procurement process for your products. Not only by providing you with the best possible product, but also by monitoring the sustainability.

Modules

To ensure an optimal operation of a PV plant, all its components have to be reliable and of highest quality. Therefore we only supply Tier1 PV modules of very high efficiency from well-known and established manufacturers.

We provide PV modules of all types and sizes in order to be able to offer our customers the right product for their individual project needs.

Substructure

The selection of substructures must be as adopted to the type of roof.

Whether it is roof tiles, concrete roof tiles, bitumen, trapezoidal sheet metal, foil or else covering. We will provide the right solution

Inverters / Storage

Inverters are the heart of every photovoltaic system. Availability and reliable producers are fundamental to the success of a pv project.

Especially in times when the construction of a photovoltaic system can take many months, reliable availability and specific planning is very important for a project's success.

Customer-oriented offer and order processing

Because we are close to our customers, we can tailor the best offers. Thanks to our decades of experience and our global network, we are able to find exactly the product for you, even with strained supply chains, that will make your project a success.

This is the only way you can carry out your day-to-day business without additional hurdles. Only with fewer hurdles for your company and more products from a single source can you operate stress-free.

Service / Advice

Modern times require a flexible response to developments within the market. A reliable and independent service, coupled with personal advice are therefore one of our core values at Solar Depot. Although more and more trading companies in the renewable market are categorically rejecting customers because they are overwhelmed by a lack of skilled workers and/or refer to your shop or the FAQ when they have questions, but not at SOLAR DEPOT.

Proximity counts here!

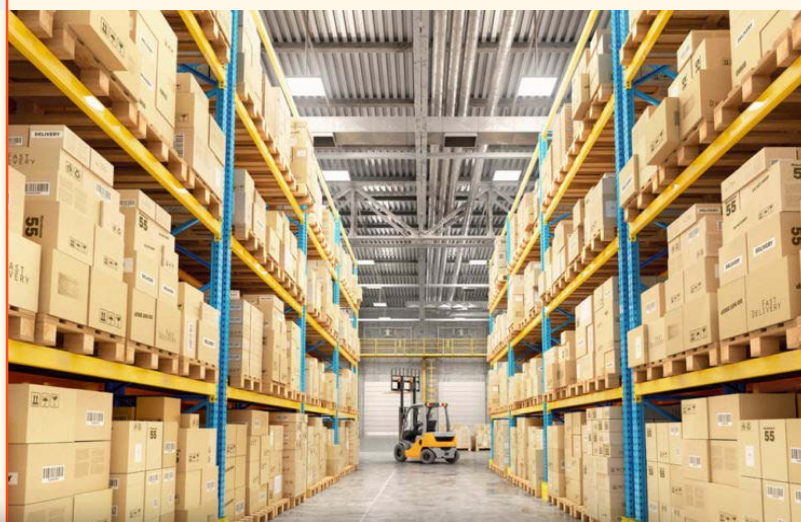

Experienced and long-standing employees will personally answer your questions and will be happy to take the time for you!

Because only if customers know exactly what they really need can they be successful.

Logistic

As we all know, a good functioning logistic is vital to success.

We ensure at all times that our shipments reach their destination not only in time and best quality, but also CO₂ compensated.
